

INFRASTRUCTURE VIRTUALIZATION SOLUTION “NETSECURER VIRTUAL SERVERS”

NETSECURER VIRTUAL SERVER – Secure your company's resources, while providing enterprise features to your users. A customizable solution for companies with unparallel web and thin client management interfaces. A NetSecurer Virtual Server is a pre-built solution on proven technologies, hack hardened and supports the next generation IPv6 internet protocol.

Some of the Protocols supported are:

- VPN – PPTP/L2TP/SSL/TLS
- Voice over IP – SIP/IAX
- File Transfer - FTP & NFS
- Infrastructure - DNS & DHCP
- Console management - SSH/RDP
- Web - HTTP & HTTPS
- Internet IPv6 support

NetSecurer Virtualization Infrastructure (basic):

- **Private Branch Exchange** – PBX-VoIP solution for connecting to telecom provider, manage all inbound and outbound calls, answer customers with an Interactive Voice Response solution.
- **Intranet/Extranet** with multiple webhosting and scripting features with MySQL/MSSQL support built-in.
- **Customer Relationship Management** solution (CRM) – Web Based CRM
- Microsoft Windows **File Sharing**.
- Scheduled **Automatic Backups** – Backup whole a network with one centralized solution.
- Data **Encryption and Compression** – Securely transfer data and reduce your storage utilization.
- **Anti-Virus/SPAM/Phishing Email protection** and filtering – filter inbound and outbound before it reaches or leave your network.
- **Corporate Email** with calendar and groupware collaboration services.
- Stateful **Firewalling** for IPv4 and IPv6 networks designed within the Virtual Network for ultimate protection.

How does the NetSecurer Virtual Server fit in an end – to – end virtualization solution?

Each NetSecurer Virtual server provides the basic to advance features of your corporate IP Network, such as File Sharing, CRM, PBX and more in a single or multiple virtual servers which can be scaled, or made redundant by running multiple instances on single or multiple ¹**NetSecurer Appliances**.
